From Editor in Chief

It is my pleasure to introduce Association Geo-information and Communication Technology (AGeoICT) in this issue. AGeoICT has been sharing knowledge of the Earth observation and applications of space technology with all scientists and researchers in the world and welcome every one to put a drop of water to flow the river and teach to bring better development for the environment and future generation. Also it explores the new research directions to fulfilling the vision of WIDM. It focuses on emerging topics and basic research findings across all sectors of geoinformation technologies and moving toward smart, digital earth and nano-geoinformation technology. It treats several fundamental issues in Geotechnical and what can be called Geo-sociotechnical issues.

This issue brings the research peer reviewed papers from Jordan, Iraq, Iran, Malaysia, and Saudi Arabia. These papers discuss the Optimum transportation routs, dynamic modeling and visualization of karst topography, sensor data storage, emergency action plan and early warning system, change detection using Landsat data, Indoor Lighting in Classrooms and Effects of Ingredients and Analytic Hierarchy Process Models in Multi-Hazard Environment.

I am very happy to inform you that International Symposium & Exhibition on Geoinformation (ISG) 2012, will be held during 25-26 September 2012 in Kuala Lumpur and now researchers can submit papers. You may access to www.isg.org.my for more information.

On a closing note, I welcome all related conferences for joint partnership and scientific collaboration and to publish special issue from their event in AGeoICT. We are very concern about the quality of the articles and the journal. Our editorial team have been trying to work out to qualify for the ISI and IF figure. I welcome all researchers, scientists, academicians, managers, directors and students to send papers and share their knowledge in this content.

Finally, welcome you all and look forward to receive your comments and suggestions that can help us for better quality in future issues, please.

Dr. Saied Pirasteh
